

Adhi Katili

Master's candidate in Environment and Climate Emergency

Email : a.m.f.katili@gmail.com
Phone : +61 416 880 823
Location : Perth, WA
Portfolio : <https://adhi-climate.tokocurahaustralia.com/>

PROFILE

Second-year Master's student in Environment and Climate Emergency at Curtin University, combining circular economy systems analysis, self-directed climate-risk data work, and hands-on commercial experience. Independently, built a reproducible Python portfolio of Western Australian physical climate-risk analyses: tropical cyclone intensity trends, the South West's cool-season rainfall decline, and an AASB S2 disclosure-readiness review of the state's largest emitters, all framed for Australia's new mandatory climate-reporting standard. Alongside study, founded and ran an e-commerce venture, gaining first-hand exposure to supply chains, compliance, and the practical limits of good intentions in a real market. Now seeking an internship or graduate role in climate, sustainability, or ESG within the field of the Master's.

INDEPENDENT PROJECTS

adhi-climate.tokocurahaustralia.com

Tropical Cyclone Intensity and Ocean Warming, Western Australia (1985–2024)

Self-directed Python data analysis, framed for AASB S2 physical-risk disclosure

Analysed 40 years of IBTrACS best-track and NOAA ERSSTv5 sea-surface-temperature data (758 South Indian Ocean systems, 194 affecting WA) to test whether the intensity of WA affecting tropical cyclones changed and whether it tracks ocean warming. Found that although the regional seas warmed roughly 0.5°C, cyclone intensity did not increase (a weak, mostly non-significant decline) and showed no positive correlation with local sea-surface temperature, so physical-risk assessment must rely on forward-looking projections, not extrapolation of the observed record. Delivered a fully reproducible analysis with Mann-Kendall, Sen's slope and OLS regression implemented from first principles and validated, plus six publication quality charts, published on GitHub.

South West WA Cool-Season Rainfall Decline (1950–2024)

Self-directed Python data analysis, framed for AASB S2 chronic physical-risk disclosure

Analysed 75 years of daily rainfall from seven long-record Southwest WA stations (GHCN-Daily / Bureau of Meteorology) alongside the Indian Ocean Dipole, Southern Annular Mode and ENSO indices to quantify the region's cool-season drying. Found a statistically significant decline of about 2.9% per decade in April - October rainfall (Mann-Kendall $p=0.001$) and a step change around 2000 (Pettitt $p=0.006$), leaving 2000 - 2024 roughly 19% drier than the 1950 - 1974 baseline, consistent across all seven stations and with published CSIRO and Bureau of Meteorology figures. Implemented every routine (Mann-Kendall, Sen's slope, OLS regression, Pearson correlation, Pettitt change-point test) from first principles and unit-tested them, with five publication-quality charts; framed as chronic physical risk for WA water, agriculture and insurance exposures.

AASB S2 Disclosure Readiness: WA's Largest Emitters

Self-directed disclosure-gap review against AASB S2

Scored three of WA's largest emitters (BHP, Woodside and Rio Tinto) against Australia's mandatory climate-disclosure standard (AASB S2), reviewing their public annual and sustainability reports across all 31 sub-requirements of the four pillars (governance, strategy, risk management, metrics and targets) with section- and page-level citations from primary documents. Found Rio Tinto (3.69, Advanced) ahead of Woodside (3.35) and BHP (2.94, Developing), with common gaps in cross-industry percentage-of-assets-at-risk metrics, quantified financial effects, and Scope 3 targets. A structured qualitative review demonstrating direct fluency in the disclosure framework itself.

ACADEMIC RESEARCH PROJECTS

Transit-Oriented Development for Climate Action and Housing

Climate Policy, Curtin University, 2025

Argued that Australia's transport emissions problem (transport accounts for roughly a fifth of national emissions) and its housing shortage share a common fix: build more homes around train and bus corridors so fewer trips require a car. Worked through the policy mechanics that transit-oriented development would actually require, including zoning reform, density targets near stations, and walkable neighbourhood design, and proposed a national program with a 2035 milestone for housing delivered near mass transit. Makes the case that climate policy and housing policy are typically developed in isolation and need to be designed together.

Australia's Housing Crisis and Lessons from Singapore's HDB Model

People and Planet, Curtin University, 2025

Set Australia's declining home ownership rate (from roughly 71 per cent in the 1960s to around 67 per cent today, alongside a 13 per cent single-year rent rise in Perth) against the UN Sustainable Development Goal target on adequate, affordable housing, then examined Singapore's Housing Development Board model, through which roughly four in five residents live in well-located public housing. Rather than presenting Singapore as a template, assessed which specific elements of that model could realistically transplant into Australia's federal-state housing system and which could not.

Feifelusia Sustainable City Vision: Circular Economy

Future Cities, Curtin University, Group report, 2026

Group sustainability planning report, designing the urban metabolic flows (energy, water, food, materials, transport) for a 630,000-person planned city in Northern Egypt. Authored the Circular Economy section: a design-for-disassembly mandate, an urban-mining cadastre for future material recovery, an anaerobic digestion plant linking organic waste to biogas and digestate, and a plan to formalise the informal recycling sector.

ENTREPRENEURIAL EXPERIENCE

Toko Curah Australia

Founder, Cross-border e-commerce, 2022 to Present

Founded and independently operates a venture supplying Australian infant formula and skincare to Indonesian families. Run procurement, logistics, social commerce, and customer service solo, including direct exposure to product compliance, supply chain risk, and the commercial pressures that make sustainable sourcing decisions hard in practice, including navigating a downturn.

WORK EXPERIENCE

Aquaculture Staff Technician

Jul 2023 – Mar 2025

Central Regional TAFE (BCMI), Geraldton, WA

Maintained fish facility infrastructure and monitored environmental conditions, water quality, and fish health across production cycles. Applied systematic observation protocols and recorded compliance data to support aquaculture management plans. Completed concurrent Diploma of Aquaculture with Outstanding Achievement Award.

Business Analyst & Warehouse Staff

Mar 2023 – Mar 2025

Localworks, Geraldton, WA

Analysed operational workflows, identified inefficiencies, and produced structured reports to support management decision-making. Managed stock records, supplier coordination, and logistics documentation in parallel with on-floor warehouse operations.

Customer Excellence Associate

Feb 2020 – May 2021

RuKita, Jakarta, Indonesia

Built a scalable customer support ticketing system from the ground up, reducing resolution time across a rapidly growing urban co-living platform. Created Google Data Studio dashboards tracking support KPIs and presented insights to cross-functional teams. Restructured customer service workflows, coordinating between product, operations, and field teams.

Tech Support Specialist

May 2021 – Jul 2022

PageFly, Remote (Ha Noi, Vietnam)

Resolved technical issues for a global SaaS product with 100,000+ users. Produced video walkthroughs and documentation for recurring problem patterns; contributed structured product feedback to the development team. Managed high-volume asynchronous communication across time zones.

Email Marketing Specialist

Aug 2021 – Apr 2022

San Furlong, Remote (Dublin, Ireland)

Managed end-to-end Klaviyo email campaigns, from brief through design, copywriting, and client sign-off. Analysed campaign performance data and applied findings to improve open rates and conversion.

Kitchen Hand

Jul 2025 – Present

Alex Hotel, Perth, WA

Dinner service support at a boutique Perth hotel. Maintained food safety and hygiene compliance alongside Master's study.

EDUCATION

Master of Environment and Climate Emergency Curtin University, Perth	Jul 2025 – Present
Diploma of Aquaculture Central Regional TAFE, Geraldton	Jan 2023 – Dec 2024
Bachelor of Marine Engineering ITS Surabaya, Indonesia	Aug 2012 – Oct 2016

SKILLS

Tools and Systems
Google Workspace and Data Studio, Klaviyo, Ticketing Systems, HTML and CSS basics

Interpersonal
Stakeholder Communication, Cross-functional Coordination, Technical Writing, Remote Collaboration

LANGUAGES, AWARDS AND CERTIFICATIONS

Languages
English: Expert
Indonesian: Native

Awards
Head of School Commendation, School of Design and the Built Environment, Curtin University, 2025
Outstanding Achievement Award, Certificate III in Aquaculture, Central Regional TAFE, 2023

Certifications

- Criminal Record Clearance, Jul 2023
- Food Handler Basics, Jul 2025
- White Card, Construction Induction
- RSA, Responsible Service of Alcohol

HEAD OF SCHOOL COMMENDATION

Dear Adhi Muhammad Faris,

I would like to take this opportunity to commend you on your academic performance during 2025 Semester 2.

In support of the school's commitment to excellence, the Board of Examiners identifies those students who have demonstrated a significant improvement in their work, or who have maintained an established high academic standard.

Your achievement during the past semester not only attests to your personal commitment to your studies, but also provides a real contribution to the reputation of the degree you are seeking. In this regard the Board recognises your efforts.

I am pleased to be able to communicate the Board's commendation together with my personal congratulations on your success.

Yours sincerely

Professor SueAnne Ware

Head of School

School of Design and the Built Environment
